

Innoviti Develops Biometric Module for Gemalto Magic3 Terminals

Bangalore, July 2007: Innoviti Embedded Solutions, a leading provider of transaction processing solutions today announced the introduction of a biometric module for Gemalto Magic3 range of terminals.

Named trueID-G™, this product interfaces to the USB port of the Magic3 range of terminals and allows the terminal to carry out biometric authentication for various transactions. The product is targeted for the financial inclusion, law enforcement and presence monitoring systems.

The biometric technology stores the templates in ISO 19794-2 format - an industry standard format and allows for the customer to use enrollment through any standards compliant system. Optional 128/256 bit AES encryption is available. Biometric interface is provided through a high performance optical scanner. The product takes power and data from the USB port thereby providing a neat USB cable interface to the terminal.

About Innoviti

Innoviti Embedded Solutions is a leading provider of transaction processing solutions for various verticals such as financial inclusion, payment, presence monitoring and loyalty. It has won several awards for its products, including the Best Consumer Electronics Product Award, Red Herring 100 Asia Award and Wireless Innovation Contest Award.
