

## Simplifying Transaction Processing

### Launching Vx510-trueID

Innoviti has extended its award-winning biometric technology, trueID, to support the Vx510 terminal of VeriFone. The Vx510-trueID product is designed as an integrated desktop biometric product that is fully compatible in its biometric capabilities with the existing Vx610-trueID and PC-trueID products of Innoviti. This product complements the portable Vx610-trueID product for counter-top requirements. The design supports both dial-up and GPRS versions. The product is designed to easily retro-fit into existing Vx510 terminals in the market thus providing customers an opportunity to upgrade their existing Vx510 deployments with biometric capabilities.

### trueServer - Software Biometric Security Module

Innoviti has enhanced its trueServer online biometric authentication server to provide for complete Software Biometric Security Module (BSM) capabilities. This allows financial institutions and system integrators to use the BSM capability to add biometric authentication for their cardholders. Innoviti's BSM provides for secure storage of fingerprint templates during card issuance and online authentication of a cardholder for transaction authorization. Multiple template formats such as ISO 19794-2, ANSI 378 and proprietary formats are supported with encrypted storage using 128/256-bit AES.

### News In Brief

#### Vx510-trueID

Counter-top biometric terminal fully compatible with Vx610-trueID and PC-trueID.

#### trueID for Pension Payments

trueID is used for secure pension payments in Indonesia by PrimaVista.

### trueID Used For Secure Pension Payments in Indonesia

PrimaVista, a leading electronic transaction processing solutions provider in Indonesia has successfully developed and deployed a biometric authenticated pension payment system based on trueID for a leading bank of Indonesia. The system was piloted in 2008 and has now been rolled out in production. This system is based on Innoviti's biometric Vx610-trueID-GPRS platform.
